

## PROPANE ACCESSORY CONNECTION

Starting with the 2012 model year, some coaches (Tour, Ellipse, Meridian and Journey) are equipped with a Propane Accessory Connection. This connection features a shutoff valve and quick connect fitting. By using this handy connection, a portable BBQ grill or fryer can be used without a separate LP tank for the device.

This connection is on the low pressure side of the propane gas pressure regulator. Portable appliances, which have an additional or built-in regulator, may not operator correctly.

The Propane Accessory Connection is provided with a safety shut-off valve. Rotate the shut-off valve “clockwise” to turn the gas supply OFF. Rotate the shut-off valve “counter-clockwise” to turn the gas supply ON.

LP Accessory Connection  
(Located behind lockable access door on  
passenger side of coach)

### CAUTION

- Turn valve off when not in use.
- Secure cap to outlet when not in use.
- After turning on gas, test gas piping connections to appliance for leakage with soapy water or bubble solution. Do not use products that contain ammonia or chlorine.

See your dealer or your propane retailer for an additional hose or fittings to use with your portable LP appliances and the LP quick connect.
